Gentlemen,

In April of this year, we observed two relatively high values at our Station 5 - Bluff hi-vol monitor. We observed a 15.35 and 13.41 ug Pb/m3. We believe these to be an aberration associated with some very unusually high wind days. While we believe these values are due to the very high winds, we have begun sampling every 3<sup>rd</sup> day to ensure that our assumption is indeed correct. We will be sampling every 3<sup>rd</sup> day at the Bluff from now until the end of the quarter.

Should you have any questions, please feel free to contact me at 636-933-3143.

Sincerely,

*James M. Lanza fame*
